

## METER MODULE 4.0

Is a turnkey system for monitoring utility meters including electric, gas, water, chilled water, steam and more.

### A TURNKEY MONITORING SYSTEM

All hardware, software and instructions are provided as an easy-to-use "Kit" that can monitor up to four meters.

Mount the panel, connect the wires, provide a Web or cell connection and view your data on-line from any Web connection within 3-5 minutes.

### NO UP-FRONT COSTS OR CONTRACTS

Try it risk-free. Get started today.  
Lease one or more modules for as many months as you like.

### CLOUD-BASED REPORTS & GRAPHS 24/7

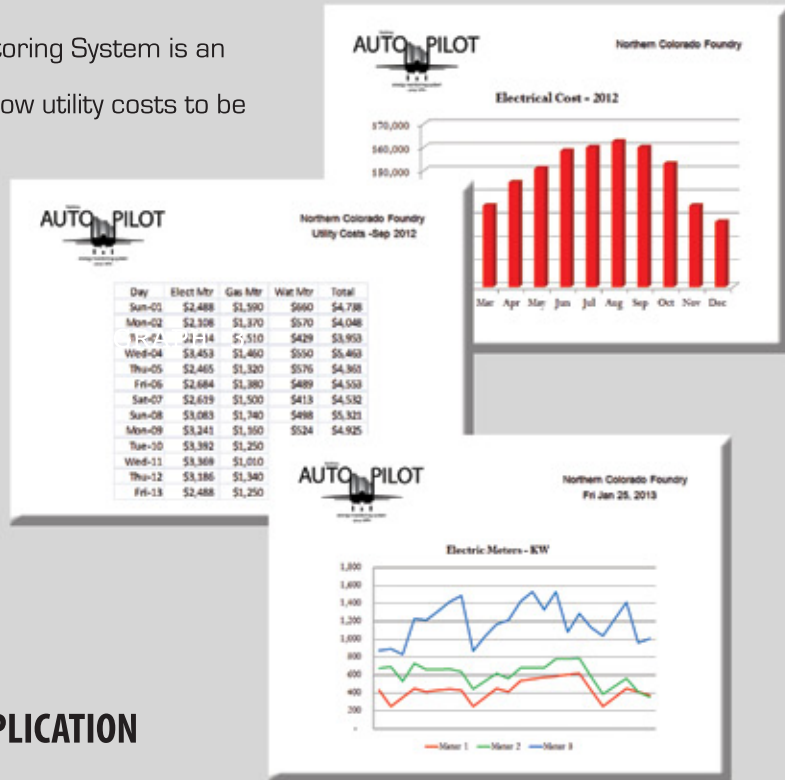

Real-Time, Historical Reports & Graphs and Extensive Analytics from any Web connection.

## METER MODULE 4.0: INTUITIVE USER INTERFACE, NO TRAINING IS REQUIRED

The Holmes AutoPilot Energy Monitoring System is an information system developed to allow utility costs to be tracked and managed like any other operating cost.

This data is organized to present the information in energy units, production units or dollars by system, department, shift, etc. according to the owner's or company's specific needs.

## KITS FOR EVERY UTILITY APPLICATION

Kits are available for Air Compressors, Chillers, Boilers, Cooling Towers, HVAC Units and more. Have an application that is not a standard Kit? Contact us and we will build a Custom Kit.

## POSITIVE FEEDBACK: KOSMOS CEMENT PLANT ENGINEER

*"We used the Holmes AutoPilot Meter data to shift our mill startup sequence and reduced our peak demand more than 2,100 KW."*
